A Model of Portfolio Investment Management of
The Islamic Endowment Funds
Using System Dynamics Methodology

Dian Masyita (dianmasyita@fe.unpad.ac.id)

Abstract

This research tries to find out the potency of endowment funds as an innovation financial instrument, especially cash waqf, to alleviate the poverty in Indonesia. This research also tries to offer a design of the endowment funds management system in a system dynamics model. Using the system dynamics methodology, we try to know the structure of the endowment funds management system and simulate the behaviour of endowment funds.

Cash Waqf, a special charitable endowment fund, is expected to become one of the alternative instruments for the poverty alleviation programs in Indonesia. These programs require huge amount of fund that cannot be provided thoroughly by the government. Therefore, initiation of new sources of fund for such a program is inevitable. In the Islamic sosio-economic concept, there is a source of social fund that is economically and politically free of charge, namely cash waqf (wakaf tunai). In this concept, Nadzir (cash waqf fund manager) collects the fund from Waqif (cash waqf payer) and invest the money in the real sector (mainly Small & Medium-sized Ventures) and in any syariah-based investment opportunities.

Nadzir will then allocate all profits and returns gained from the investments to any poverty alleviation programs to enhance the quality of poor people’s life, such as free education and health service, cheap basic food, etc. Nadzir is obliged to maintain the amount of fund in such a way that it does not go below the initial amount. Therefore, Nadzir not only should be highly capable, but also needs a financial institution, which has been proven to be experienced, highly capable and effective in helping SMEs development efforts, since such a microfinancing program is considered as the most vital portfolio in the poverty alleviation program. Therefore, it’s necessary to design an instrument which is able to control the endowment funds management especially cash waqf.

Keywords: the endowment funds, cash waqf, portfolio investment, poverty alleviation, system dynamics

1. Preface

In the year 2005, the Indonesian poverty rate has been still discouraging. The poverty indices are still higher than those of the previous years. The economic crisis beginning in 1997, does not end until now. In addition, the Tsunami Disasters destroyed two provinces in Indonesia i.e. Nanggroe Aceh Darussalam and North Sumatra in the end of the year 2004. Based on the Statistics Central Bureau (BPS)’s data, there are about 40 million Indonesian people who are under the poverty line.

Indonesia has come into debt trap made by the Indonesian government and the private sectors. Large amount of debt has weakened Indonesian economy for the past seven years. Meanwhile, the government has been confronted with the deficit budget almost every year since 1997, which means that the government may find it difficult to cover its routine expenditures1.

Those regular balance sheet items require so large amount of fund that government cannot provide adequate fund for other strategic needs, such as good education, appropriate health, poverty, and SME’s development. Mismanagement of debts is the largest of all factors that make Indonesia go into crisis. Consequently, all of citizens and their offsprings have to carry the heavy burden of that debt.

2. Problem Identification

One of potential solutions to the necessity of sufficient fund for public needs is a special endowment fund, cash waqf, from people’s donation. People donate their money as cash waqf by purchasing cash waqf certificate. The gathered fund will be then invested in various investment portfolio and the profit of which can be spent for the above mentioned public necessities. The gained profit will also be used for funding poverty alleviation programs, while the principal of funds will be reinvested in various highly profitable investment opportunities.
Waqif donates his/her money as waqf fund to Mauquf' alaih (a person who is entitled to get benefit from waqf fund) through Nadzir (a person/an institution being in charge for managing waqf fund and distributing returns of waqf investment). Only gains of the invested waqf fund will be delivered to Mauquf' alaih. The principal of funds keep being invested in potential investment opportunities. In relation to its role as waqf fund investment manager, Nadzir on behalf of Waqf Institution may allocate some waqf funds to financial portfolio and finance SMEs’ businesses on the basis of profit-loss sharing system.

The larger the investment returns, the more fund can be allocated to poverty alleviation program. In some countries, waqf fund management has reduced poverty effectively and enhanced people’s welfare, by providing additional fund for education & health development programs, cheap houses & public facilities development programs, and so forth.

necessary to design an instrument which is able to control the cash waqf management.

Based on the survey’s result, using exclusively designed computer program then simulated with system dynamics methodology, some scenarios of cash waqf implementation to formulate some policy concepts applicable in Indonesia. The computer program was designed to help the policy makers (1) estimate cash waqf potential in alleviating poverty in Indonesia, (2) supervise performance of nadzir or waqf fund management institution, and (3) identify appropriate policies conducive to poverty alleviation programs. Since there was no similar study preceding the research, some assumptions were applied. The ability of three national TV corporations (RCTI, SCTV, and Indosiar) to collect donation amounting 2 billons Rupiah in two nights in 2000 and the other charity programs to collect donation in 2001-2005 were used as an assumption basis of amount of fund could be gathered by cash waqf management institution9. This research also used data supplied by Biro Pusat Statistik Republik of Indonesia (National Beaurau for Statistics), BKKBN Republic of Indonesia (National Coordinating Agency for Family Planning) and Islamic Financial Institution.

5.1 Limitation of Research
This research put more emphasised on financial management especially raising and investing of cash waqf funds. The duties of Nazir, as a cash waqf fund manager, are to increase the cash waqf funds and invest those funds in profitable portfolios. As we know, the poverty alleviation problems are complicated. However, they need multidiscipline knowledge to formulate and figure out the solutions. With this research we want to try to make an early design of poverty alleviation in the financial viewpoint using system dynamics modeling.

6. General Description of System Conceptualization
The system conceptualization involves establishing model boundary, identifying causal relationships and policy framework10. In this research the model boundary includes all relevant factors that are considered important in the problem context. The model comprises six interrelated components in the cash waqf management as shown as Figure 1.

---

Figure 2. The Interrelationship Among Variables in the General System
3) The global fund management sectors,

4) The microfinance sectors.

5) The direct investment in large and medium scale enterprises,

6) The distribution sectors of the profits of cash waqf investment (see figure 4b). (Investment profits link to the poor through the poverty programs).

The interrelationship among variables can be seen in figure 2.

7. The Cash Waqf Management Control

The survey concluded that most people did not trust any existing government institutions to manage cash waqf fund and control cash waqf investment activities, especially because cash waqf management will involve large amount of endowment funds. Most of them also recommend that if a special purpose institution is established to manage cash waqf fund, it has to be highly capable of detecting any potential dishonesty and assessing performance of cash waqf fund manager, i.e. nadir. Therefore, it’s necessary to design an instrument which is able to detect the human error in decision making either mismanagement or dishonesty quickly (see figure 3c & 3d).

The collected cash waqf fund from the waqif will be distributed to the various portfolios and then the usage will be controlled periodically. The early warning system will be prepared by the system in order to the amount of cash waqf fund will not go below the initial amount. It is the difference of the cash waqf from the other sources of funds. Gold standard can be used as the currency standard because of its stability. (see figure 3a-d).

Figure 3a: The Simulation Result (Short-Term)

Figure 3b: The Simulation result (short term)
8. The Potency of Cash Waqf for the Poverty Alleviation Programs

It can be concluded from the system that the larger the amount of cash waqf collected, the larger the amount of fund can be invested in highly cost-effective profit sharing-based portfolios, and the larger the amount of return can be distributed to poor people. The more fund allocated to finance microbusiness, the sooner poverty in Indonesia can be alleviated. (see Figure 4a).

The waqif and public can control or monitor the cash flow of cash waqf investment. If mismanagement and dishonesty occurred, the simulation result could demonstrate the deviation. (see figure 3e-f)

9. The Simulation Result

Since there has been no similar study preceding the research, some assumption were applied. The ability of five national TV corporations (RCTI, SCTV, Indosiar, MetroTV and Lativi) to collect donation amounting 3 billions Rp in two night in 2003 was used as an
assumption basis of amount of fund could be gathered by cash waqf management institution.

It was then assumed that the cash waqf institution could obtain 20 millions Rupiah a day in form of cash waqf from various components of Indonesian people. The study also assumed that the gathered fund would grow 25% annually and it would be invested in Islamic financial products with profit sharing- based various rate of return.

Using the above assumption and data supplied by Biro Pusat Statistik (National Bureau for Statistics), BKKBN (National Coordinating Agency for Family Planning) and syariah financial institution in Indonesia, the computer-based data process resulted. Such an amount of fund is expected to be available for the poverty alleviation efforts in Indonesia, especially through microfinance distribution program. If this plan can be implemented smoothly and if those assisted micro enterprises can get well run maximum of 8 years after being financed, it will take approximately 12500 days (35 years) to eliminate poverty and 22400 days (63 years) to increase quality of life for Indonesian population. (see figure 5a-b) Poor people, in this study, are those with very low quality of life. In other words, poor people are not only those who cannot feed once a day, but also those who cannot afford proper health and education services.

Based on the study result above and various scenarios proposed, if the gathered fund through cash waqf certificate increase i.e. Rp 50 million in a day, it will take approximately 11000 days (30 years) to eliminate poverty and 21000 days (57 years) to increase quality of live for Indonesian population. (see figure 6a)

10. Conclusions
This work is an attempt to provide Board of Indonesian Waqf and policy makers in Indonesia with a “microworld” in which they can experiment with their policy options, prior to adoption. This helps them test their mental models regarding the solutions they see for the problems associated with portfolio of Islamic endowment funds investment management. The model could be used a basis for other cycle model of donation funds. We would expect that expanding our model to include all players in the endowment funds and donation funds such as Zakat, infaq, shadaqah etc. and linking it with a macroeconomic model, would probably reinforce the cyclical behaviour.
