ABSTRACT

Disease can also be a risk and stigma arising from supernatural and leads to many health problems for appropriate public perception. This of course leads to many problems lead to sickness to health. Construction of dams *Jatigede* it brings a lot of very difficult issues, including their perceptions of the causes of the disease. Risks and health stigma that occurred in this study is result by flooding reservoirs *Jatigede* which then makes the delicate creatures that can create health risks for residents and stigma *Jatigede* reservoir. Question in this research is how the health risks and the stigma of being smooth due to disruption due to reservoir inundation *Jatigede*. This study uses quantitative data with qualitative analysis. This in this study was also conducted by interview and observation. Data obtained from research *Academic Leadership Grant (ALG) Resettlement Jatigede*, Padjadjaran University. The results showed that the residents around the reservoir *Jatigede* still believe that the disease could be caused by *jin*, *kuntilanak* and *demit*. Risks and health stigma caused by *jin*, *kuntilanak* and *demit* is crazy, sudden fever, prolonged dizziness and fainting suddenly.

INTRODUCTION

Stigma in the community *Jatigede* an important part that must be done is the stigma that existed in society. Stigma happens is it caused a lot of disease and health that exist in society. Communities to understand health, the stigma that existed in society who experience stigma against the disease that took for their stigma in a society that considers that the disease is caused by spirits. Interventions has resulted in this delicate creature then makes the disease befall a person. And that's what causes people to be afraid of the harmful effects of disruption spirits that cause a person affected by the disease and the disease was attacking and making someone gets sick means that the community is expected to bring the community becomes an important part in society. Community is an important part that must always be an important part of a society in which *Jatigede* region is an important part of the community *Jatigede*. Stigma in carrying the public is an important part of the community is important in that it brings to the community changes. Community is an important part of a community that has always been an important part that must always do everything for health. Previous studies on reservoir *Jatigede* also performed as Suwartapradja et al (2015); Harahap (2015); Harahap (2016) and Harahap (2016). This means that this study is a continuation of previous studies conducted.
